PROFILE
<p>My curiosity and willingness to learn from other disciplines has triggered me to pursue a dual and innovative approach of study in order to bridge creatively the gap between theory and practice. My research methodology focuses on synthesizing archaeological, literary and scientific evidence in order to illuminate aspects of private and public life as well as to develop significant historical arguments regarding societal transformation and economy of the ancient Greek past. My overall academic and professional experience has required me not only to interact with different individuals and/or groups of people of various backgrounds and disciplines, but also to adapt to different situations and circumstances. By successfully managing different stakeholder expectations over the years, my leadership, problem-solving, influencing and overall communication and listening skills have been strengthened. Most importantly, it has made me value the positive and synergetic effect of team work. I believe that though Greek cultural heritage is a source of national pride, its potential to contribute to socioeconomic growth remains untapped. Within this context there is great opportunity, via research program funding related to Cultural Heritage, to develop relevant management plans which could serve as a benchmark for a national strategy.</p>
